- 2 Model-based Solutions**
- 3 Applications 1: On-board Diagnosis**
- 4 Applications 2: FMEA**
- 5 Applications 3: Workshop Diagnosis**
- 6 Applications 4: Authoring Systems**
- 7 Research Topics**

# GenRad: Generation of Diagnostic Trees

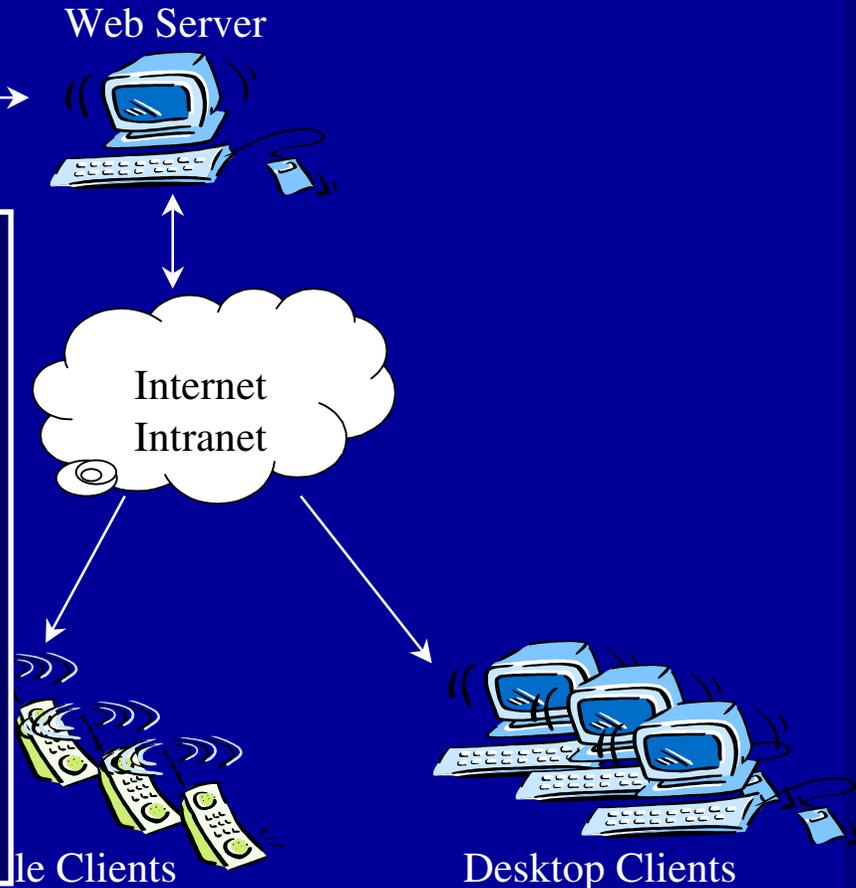

## GenRad

- Provider of testers & guided diagnostic routines
  - Executed on portable/hand held test equipment
  - Used in vehicle service bays to guide technician
  - Diagnose up to 10,000 possible faults per vehicle
  - Up to 3,500 vehicle variants per customer
  - Delivered in 28 languages to 17,000 dealerships
- Vehicle variant handling
    - Diagnostic strategy vs vehicle data
  - Language independence
    - Text is never embedded within application
  - Authoring process and tools
  - Validation and feedback processes
  - Build and release processes
  - No adverse effects by using MBR

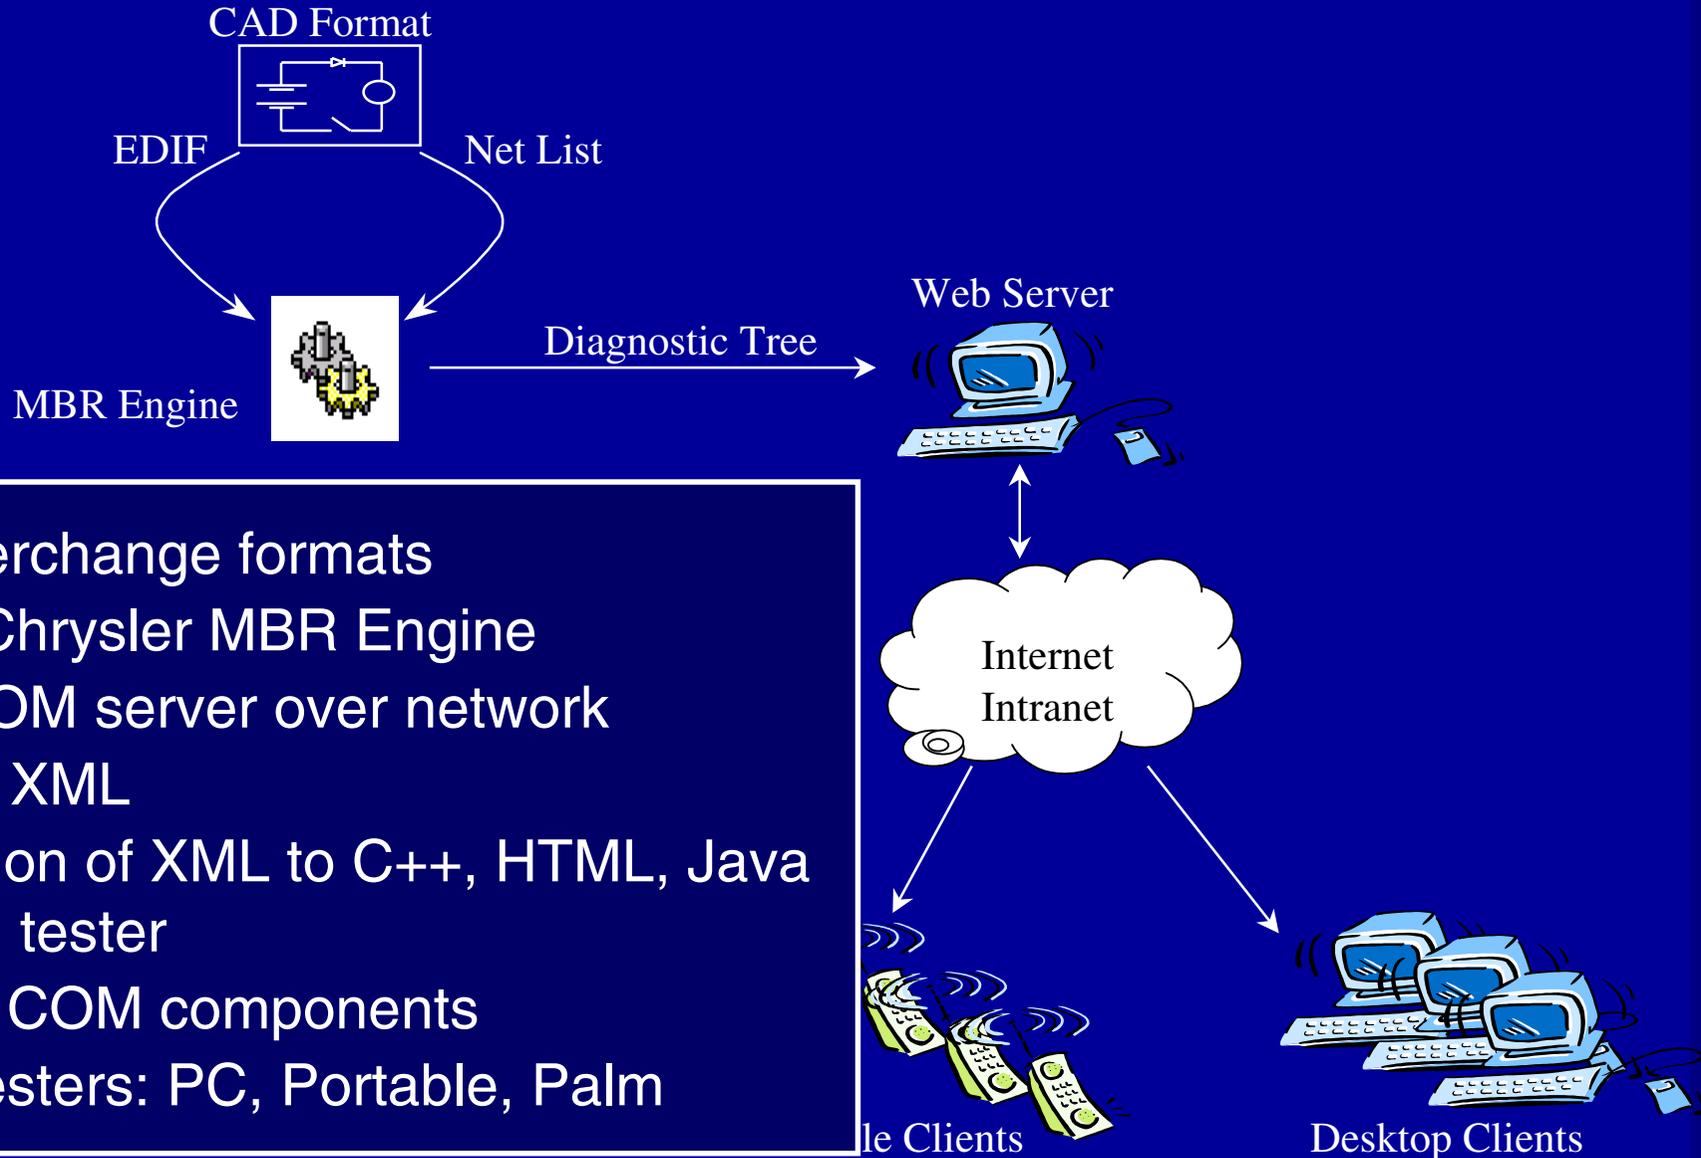

# The Model-based Contribution

- Load CAD harness/system designs
- Determine possible faults
- Simulate effect of each individual fault
- Compare results
- Determine useful tests
- Build diagnostic tree (cost vs benefit)
- Converts tree into executable code for tester

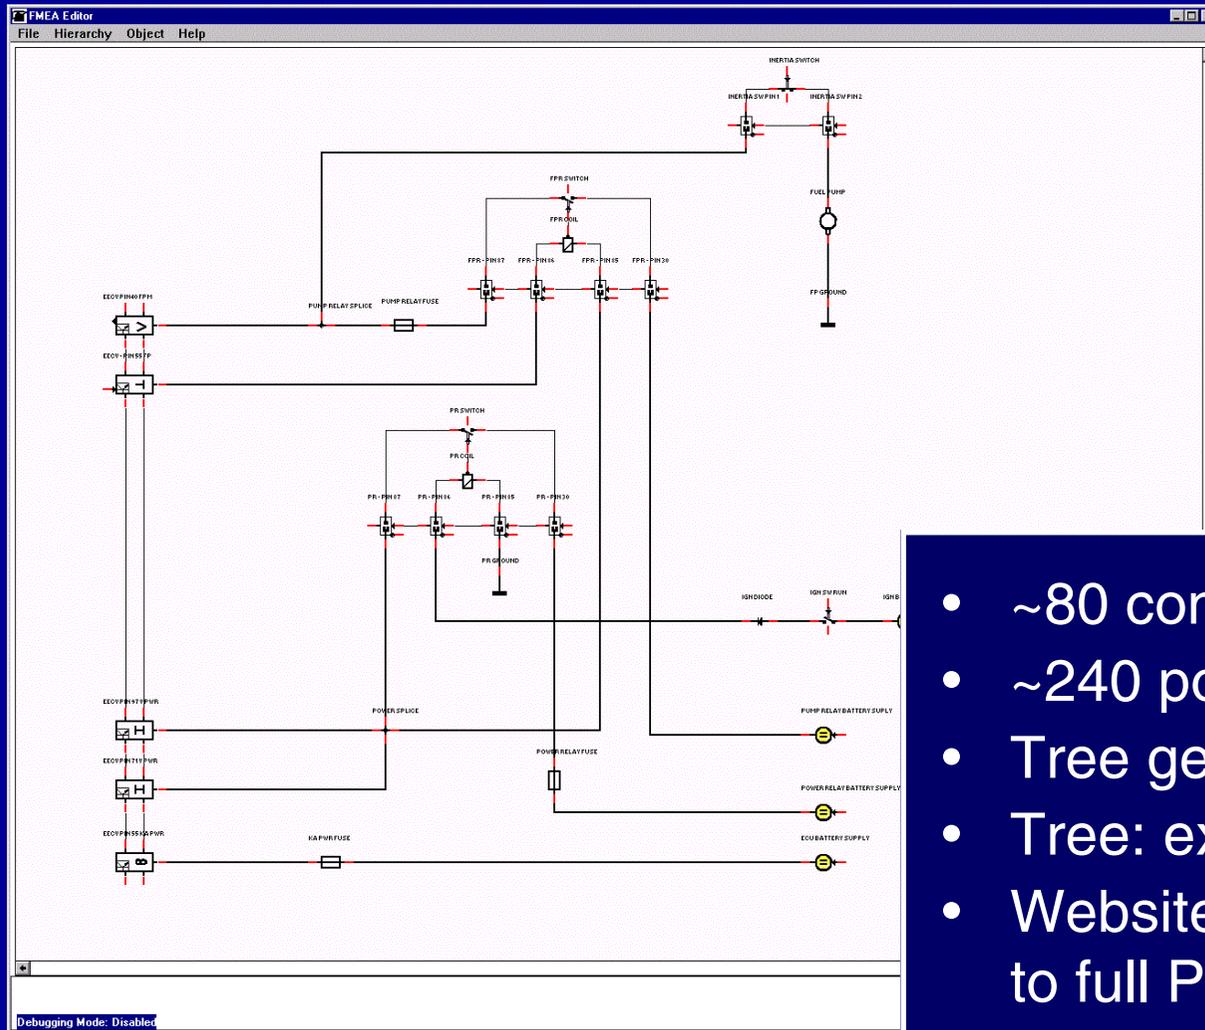

# Technologies Involved

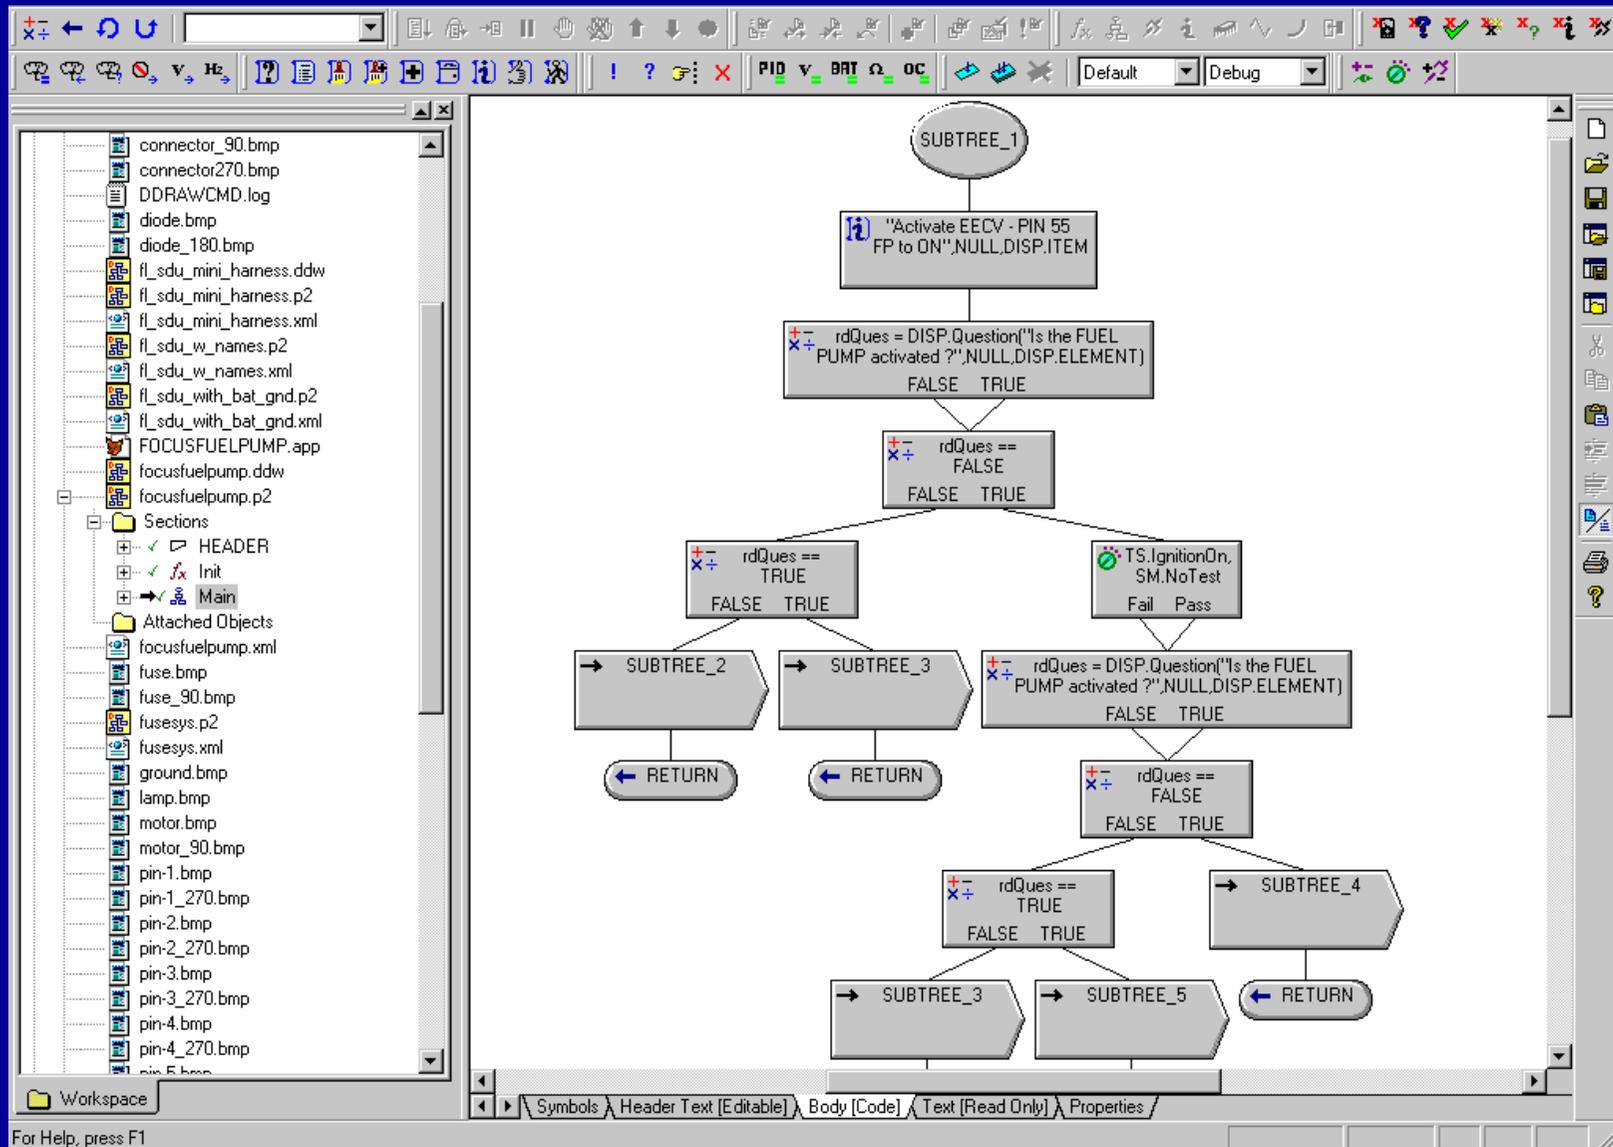

- CAD Interchange formats
- DaimlerChrysler MBR Engine
- as a DCOM server over network
- Tests as XML
- Conversion of XML to C++, HTML, Java to run on tester
- Done by COM components
- Target testers: PC, Portable, Palm

# Example: Fuel Pump Control System

- ~80 components
- ~240 potential failures
- Tree generation: ~10 Minutes to
- Tree: executable or website
- Website runs on very thin client up to full PC
- Validation on vehicle: tree correct

# Generated Tree in Authoring Environment

# Model-based Reasoning: Benefits

- **Re-use** of existing CAD data
  - **Faster** turn-around of diagnostic production
  - Automation: consistent and **error-free code**
  - Reduction of manual authoring = **Lower cost** of diagnostics = lower cost of vehicle ownership
  - More satisfied customer, greater customer loyalty
- Three working modes:
    - Interactive diagnosis (not yet fully IDE integrated)
    - FMEA (not yet fully IDE integrated)
    - Tree generation (integrated)
  - GenRad has sole licensing agreement
  - DCOM interface fully implemented for all services
  - Currently integrating remaining services into GUI
